Avian Data/Research Volunteer Opportunity

Looking for an ambitious student that is interested in further developing data organizational skills and research experience. Commitment is a minimum of 3-4 hours/week.

Data tasks include data proofing and identifying and organizing digital photographs of prairie-sagebrush avian species in adult, juvenile, and incubation periods. Research will involve background research summaries, creating and maintaining research contacts, and assisting in developing grant proposals. Other associated tasks may be available if interested. The individual will work closely with researchers in the Avian Science Center located in Forestry 303. This is a great opportunity for students to obtain professional experience and learn about birds in Montana.

To apply:

Please send a letter of interest and your current resume/CV to: ASC@umontana.edu. Applications will be reviewed starting October 15, 2019, and the position will be filled as soon possible after that.
